SUMMARY

Full-stack developer and 2025 informatics graduate who builds web apps end to end in Laravel, Next.js and TypeScript. Already deploys and maintains Laravel and Next.js systems serving 1,000+ students as sole IT staff. Also builds LLM apps with RAG, AI agents and workflow automation. The five projects below have tests, Docker and CI, and each one has a public live demo. Open to full-time remote and freelance or contract work.

EXPERIENCE

Full-Stack Developer (sole IT staff) | Piwulang Becik (non-formal education centre), Salatiga | Oct 2025 – Present

- Took over and audited a multi-tenant Laravel school-management system, fixed security issues, added an exam module.
- Built and maintain a Next.js + MongoDB LMS for student clubs. Together, the two systems serve 1,000+ students.
- Deploy both with Coolify on a VPS. Fixed the failing Laravel tests and cut typical CI test runs from ~33 to ~2 min.
- Built an exam question bank app and an SOP site. Provide IT support, troubleshooting and technical documentation.

Coding and AI Teacher | SMK Bisnis Manajemen Kristen Salatiga (vocational high school) | Dec 2025 – Present

- Teach Python, pandas and scikit-learn (supervised learning, model evaluation) in labs, and assess student projects.

Kampus Merdeka (MSIB) Independent Study | AMATI Indonesia (Feb–Jun 2023), Sekolah Ekspor (Aug–Dec 2023)

PROJECTS (PERSONAL PROJECTS, OCT 2026)

antre | Queue and booking system | Laravel, React, Inertia, PostgreSQL | antre-eight.vercel.app

- Clinics and barbershops take walk-in tickets and deposit bookings, and a waiting-room TV calls numbers out loud.
- Simulated 4 concurrent counters on Postgres: 400 tickets, each called exactly once, p95 64 ms. 206 Pest tests.

warung-pos | Offline-first point of sale | Next.js, TypeScript, Drizzle, PostgreSQL | warung-pos-ashen.vercel.app

- Keeps selling when the internet drops: each sale is saved in IndexedDB first, then synced in batches with backoff.
- Made sync idempotent so a retry can't count a sale twice. 1,000 queued sales sync in about 3 s. 10 Playwright e2e tests.

invoice-flow | Workflow automation | Laravel, Prism PHP, PostgreSQL | invoice-flow-three-henna.vercel.app

- Turns Indonesian PDF invoices into typed data in a queued job, using a custom prompt and LLM structured output.
- Added total, PPN and duplicate checks, then human approval, CSV export and an HMAC-signed webhook with retries.

docs-rag-assistant | Document RAG | FastAPI, LlamaIndex, pgvector | docs-rag-assistant-psi.vercel.app

- Answers questions on PDF, DOCX and Markdown files with page-level citations, streamed over SSE from a REST API.
- Wrote a small 19-question retrieval eval (hit rate, MRR) and used it to set the cutoff for declining to answer.

research-agent | AI agent | Python, LangGraph, FastAPI | research-agent-mauve-eight.vercel.app

- Plans, pauses for human approval (LangGraph interrupt), searches in parallel and writes a report with sources.
- Added a token budget, round and page caps, and Postgres checkpoints so a paused run resumes in a new process.

OTHER PROJECTS

- **ralaex** | Household finance PWA | Next.js, Supabase | 2026 | github.com/ramaraihan12/ralaex
- Ticket-sales web app: Midtrans Snap payments, QR-coded PDF tickets, admin dashboard | Next.js, Supabase | 2026
- On GitHub: shop-support-bot, llm-gateway, webhook-inbox (Rust), pg-backup (Go), text-to-sql-chat, issue-triage-action

SKILLS

- **Programming languages:** PHP, TypeScript, JavaScript, Python, SQL · **Frontend:** Next.js, React, Inertia, Tailwind CSS, Blade
- **Backend & APIs:** Laravel, Node.js, FastAPI, Hono, REST APIs, API integrations, webhooks, SSE streaming, queues, Midtrans
- **Databases & ML:** PostgreSQL, pgvector (vector database), MongoDB, Supabase, Drizzle ORM, pandas, scikit-learn
- **AI/LLM:** RAG, AI agents, tool calling, prompt engineering, structured output, embeddings, LangChain, LangGraph, LlamaIndex, Vercel AI SDK, Prism PHP, Ollama, OpenAI/Gemini/Claude API adapters, MCP
- **AI-assisted development:** Claude Code (agents, skills), local LLM coding setup (llama.cpp, Ollama)
- **DevOps & tools:** Git, GitHub Actions (CI), GitHub Issues and Projects, Docker, Docker Compose, Coolify on a VPS, Vercel
- **Testing:** Pest, PHPUnit, Vitest, Playwright, pytest, msw (mocked LLM calls)

EDUCATION

Bachelor of Education in Informatics and Computer Engineering Education | Universitas Negeri Semarang

Aug 2020 – Jul 2025 · Cum laude, GPA 3.61/4.00 · Capstone: web-based student information system

LANGUAGES

Bahasa Indonesia (native) · English (professional working proficiency; UNNES TOEFL-style test, score 517, 2024)
